

QC COPPER & GOLD

Opemiska Drill Sections: For May 31, 2021 News Release

QC Copper & Gold Inc. | TSXV: QCCU | OTC: QCCUF | www.qccopper.com

Assay Results Saddle Zone

- Vein on Surface
- Drilled Hole (with mineralized zone)
- Modelled Optimized Pit

- ① -From 140.0 to 195.0 m, **55 m @ 0.303% Cu-eq**, incl. from 170.0 to 177.5 m, **7.5 m @ 1.46% Cu-eq**
- ② -From 132.0 to 158.0 m, **26 m @ 0.370% Cu-eq**
- ③ -From 57.0 to 78.0 m, **21.0 m @ 0.522% Cu-eq**
- ④ -From 25.5 to 36.0 m, **10.5 m @ 0.511% Cu-eq**, and from 144.0 to 165.0 m, **21.0 m @ 0.443% Cu-eq**
- ⑤ -From 110.4 to 150.0 m, **39.6 m @ 0.495% Cu-eq**
- ⑥ -From 221.5 to 251.6 m, **40.1 m @ 0.709% Cu-eq**
- ⑦ -From 49.5 to 187.5 m, **138.0 m @ 0.48% Cu-eq**, incl. 111.0 to 187.5 m, **76.5 m @ 0.78% Cu-eq**, and incl. 133.4 to 161.2 m, **27.8 m @ 1.40% Cu-eq**

Note: The modelled pit as well as the potential pit are conceptual in nature and are not derived from a NI43-101 compliant mineral resource but are meant for illustration purposes only. There are no Current Mineral Resources on the Opemiska Property because insufficient work has been done by QC Copper and Gold Inc. to define mineral resources. Readers are cautioned that a realistic open pit model presumes the excavation could be done profitably which is not possible to be established at this time on the Opemiska Property.
